

09/11/2015 201505 The Role of Physical Therapy in Wound Healing

Objective	# Resp	Avg.
1. Identify various advanced Physical Therapy modalities and how they apply to wound care.	177	4.695
2. Identify various traditional Physical Therapy modalities and how they apply to wound care.	177	4.661

Jamie Birmingham	Seaker Overall Avg:	4.750
Presentation was fair, balanced and free from commercial bias		4.84
Teaching Methods/Ability		4.64
Demonstrated Expertise and effectively communicated the topic		4.77

I think the material could be cut down with same effectiveness. Found the alternative forms of therapies, such as e-stim and phototherapy interesting and would like to see them used more. Ms. Birmingham was a good speaker and confident in her knowledge

The role of the physical therapist is essential to the collaborative role of the multidisciplinary team in the prevention and resolution of pressure ulcers.

GOOD PRESENTER AND VERY ENTHUSIASTIC...SHE NEEDED TO MOVE HER PRESENTATION ALONG....BUT THE INFORMATION AS WONDERFUL...

She reviewed a lot of information that I had forgotten about

Great to hear from a physical therapist! Suggest short movie on each modality to see how it is used.

This speaker was a joy, we need more of her caliber forming our teams.

Speaker went over time limit which cut into break and next speakers time cutting short time for questions.

Glad to have PT dept. in my facility, we rely on them for Hydrotherapy.

unexpected good lecture based on handouts. glad to have interdisciplinary passion for wound care.

Enjoyed the more advanced explanations on physical therapy modalities. Many slides were much too basic.

Works in acute rehab hospital and the presentation reenforced knowledge which should help with better communication with our facility's physical therapy department.

A fascinating topic and I wish the speaker had more time to discuss the wound treatment modalities, as WOC nurses are always trying to find treatments/tips to help wounds heal faster. The speaker was excellent and I loved her enthusiasm!

Ease of speaking was good with excellent analogies .

Hope that all can realize the positive impact PTs and OTs can have when it comes to promoting wound healing

Having just gone through a total knee, I certainly recommend PT for care and healing. Phototherapy, Pulsed shortwave therapy, Electrical stimulation, excellent examples of methods used to assist with healing

Great presentation with information I will be able to take back to our practice

very good lecturer

It would have helped to have pictures of the modalities in use and pre/post treatment pictures

more pictures!! Great information,

very knowledgeable. Good speaker

Excellent speaker who was very dynamic and committed to this session and topic. Really enjoyed the talk.

Wonderful to have our PT colleague join us to share this information

Enjoyed the presentation and how Physical Therapists' role complements that of the WOC Nurse.

Glad to have an interdisciplinary speaker- great session

very good speaker - enjoyed her take on team work between PT & nursing

Expanded knowledge of impact PT can have on wound healing and various modalities to aid in wound healing was excellent

Great to hear all of the options PT use.

great and interesting information especially on e stim for pain control. I worked for Piedmont hospital in Atlanta (inpatient and outpatient wound care) for 5 years with a PT CWS as my manager (Teri Biven). Half of the department were PT CWSs the other h

good information.

Went over and took time away from next speaker. Should finish on time.

This was very helpful- PT are frequently unsure of their role and what they add to the team- will use this information

The speaker also discussed the use of non medical pain relief using distraction, position change and exercise.

debridement helps prevent plan to cutest helpful

Great session - appreciate PT in wound care

Interesting information about photo-therapy

this PT is passionate about wound care- great job!

Not as informative as I had expected.

She got off topic some but great presentation

appreciated explanations of the modalities. Very interesting

Informative. Very good speaker.

She had a lot to say and was very excited in role of wound care as a Physical Therapist. Would love to work with her. The Physical Therapists have more available in their arsenal of products.

PT is not utilized so much in our hospital for debridement (I have seen it in other hospitals), but I believe the biggest area for utilizing PT for debridement comes in the out patient clinics and long term care.

Would like to have heard more specifics on advanced therapies

Ms. Birmingham did a terrific job explaining different modalities including pulsed short-wave therapy and ESTIM

This was my favorite session of the conference.

thanks for the great info! very relevant to our practice!

nice presentation with great information to consider in looking at a multidisciplinary team approach across the care systems

very good speaker, engaged and interesting

interesting

PT TAKES CARE OF THE ENTIRE PATIENT,NOT JUST THE HOLE IN THE PATIENT.

Interesting.

Had not really thought about how PT could impact wound healing

great presentation of the role of PT with wound healing. excellent examples of what PTs can provide that most WOCNs cannot - such as seating considerations, use of adjunct therapies

Great perspective which promoted interdisciplinary care.

Interesting overview of the PT role in wound healing.

Excellent talk. I really enjoyed this talk, considering I work in an LTAC facility and as very involved with the PT's. To much information at the end.

very passionate about wound care
