

09/11/2015 201506 Telemedicine

Objective	# Resp	Avg.
1. Describe innovative technologies that enhance documentation and care coordination in WOC care.	177	4.718
2. Examine impending telemedicine technologies and how they will impact WOC nursing.	177	4.718

Ben Peirce	Seaker Overall Avg:	4.751
Presentation was fair, balanced and free from commercial bias		4.80
Teaching Methods/Ability		4.69
Demonstrated Expertise and effectively communicated the topic		4.77

Telemedicine and sharing of photos is a very helpful tool, especially as our speaker explained for his Home Health Care practice, however photos are not definitive. I appreciated his tips on how to standardize photos and using a measuring device, however I have been thinking of ways to encourage patients to use health apps to evaluate their own health and fitness.

very good speaker

Excellent, thought provoking presentation. Ben Peirce was a dynamic speaker, knew his material and was well spoken.

The future - technology definitely can positively impact healing. Great presentation!

Maybe could have been a little more specific to wound care/telewound. My overall concern that I would like to hear solutions about are electronic programs that were developed specifically for health care and even more specifically for wound care.

Learned about CMS "Meaningful Use", Phase 2, which is probably what has sparked my hospital's Patient Portal/info sharing site.

nice overview of how the future is evolving into more technology.

very knowledgeable on the topic.

fast paced. New information. Very interesting!

great info on tech to enhance care

Very cool technology.

Session made me aware of these technologies and very interesting to know.

definitely seems that this will be the way of the future.

Good information for a new trend to help patients stay out of the hospitals.

spoke a little too fast but had a lot of great ideas and tips

talked a bit too fast...if looking at notes, don't announce it!!

Excellent

Ben is a great speaker. Always enjoy his insight. Content was informative

well-balanced discussion of the role of internet / electronic-age technology in healthcare, challenges and benefits.

Sparked enthusiasm to promote telemedicine in our facilities.

Since not in the home health setting any longer, this session did not hold my interest for long. I can see how this technology could be useful possibly in the hospital realm.

Feel telemedicine is here but many of us wondered if it is possible to secure information on all these electronics.

Always enjoy his presentations. He is outstanding

Would like to have seen some specific EMR wound documentation

The telemedicine will open up a whole new way of doing homecare with so few Certified wound care and ostomy care nurses available. Was a true eyeopener to this nurse who needs to get a smart phone!! But would miss the patient contact if I just sit in the

Very techie!! I am very challenged when it comes to the computer and technology so I found it difficult to follow at times.

Telemedicine is the use of medical information exchanged from one site to another via an electronic system. A concern is privacy. Also discussed was the use of keyboard shortcuts.

this helpful in my practice

Loved the topic

Good speaker

Ben Pierce is always a great speaker! Interesting information about decision support software and use of smartphones!

I love telemedicine and don't think we use it enough

Very interesting and inviting use of technology to implement in our practice.

would have also loved a telling of what an average day practicing wound care via telemedicine would be like, what the average salary range was in addition to all of the great information provided in the lecture. Very interesting.

Interesting perspectives on new technologies and the future impact on our speciality

good speaker

great information! I really enjoyed hearing about the van - innovative!

Interesting ideas and new technology - would love to see where this is going

super presentation- one I am deeply engaged in and looking for more WOC nursing involvement

I learned a lot what technology can do.

THIS IS THE FUTURE OF WOUND CARE. WOC CAN ASSESS WOUNDS FROM HOME.

topic was very familiar to this learner. Have been using telemedicine for many years in my practice. Did not feel that the speaker shared new information even for those who may not be that familiar with the topic.

I need a new tablet to keep up!

Interesting information.

Fantastic program and presenter with excellent take aways

working with our team at the VA on expanding tele health into wound care. Informative and will be able to apply some of the concepts within our VA team.

Excellent picture of how telemedicine will impact healthcare in the future

Great information for homehealth nurses as well as others in wound care

very foward thinking for our future
