

**09/12/2015 201510 Understanding Urinary Catheters: Keep the Flow Going**

Objective	# Resp	Avg.
1. Discuss catheter regulations and types of catheters utilized in various health care settings.	167	4.844
2. Explain the types of urinary catheters and current catheter care.	167	4.844
3. Describe the current evidence-based practices for prevention of CAUTI	167	4.916
4. Identify patient education content related to catheter care	167	4.820

<b>Judy Dattilo</b>	<b>Seaker Overall Avg:</b>	<b>4.880</b>
Presentation was fair, balanced and free from commercial bias		4.90
Teaching Methods/Ability		4.86
Demonstrated Expertise and effectively communicated the topic		4.89

good information

Well informed speaker- good information. I am a wound care nurse but good information to assist future patients with incontinence issues.

very knowledgeable speaker

informative

Lots of very good information; presented well. Chronic catheter issues are a huge issue--good up to date info.

very knowledgeable

good information, great speaker, useful for practice

lots of evidence based information!!

Excellent talk.

I learned a lot from this

Ms. Dattilo did review the different kinds of catheters and indicated the walls of silicone catheters a thinner so the lumen can be larger.

great info reviewing problems and possible solutions regarding catheter use

I really liked the slide on pressure mapping of dependent loops in the catheter tubing! She did not provide much emphasis or explanation of acceptable daily meatus/catheter care.

Request an SP cath if necessary. That was good to hear.

Great info of practice things I had forgotten

Gathered information that I will be able to take back to my practice

Good basic presentation for the novice WOCN

Useful information.

The speaker provided good bedside tips for trouble shooting catheter related problems. Well done!

wonderful compilation of knowledge.

Did not know that Vinegar & water was no longer the recommended cleaning of drainage system.

Great topic not often practiced by WOC Nurse when focused too much on wounds and ostomy. THANKS!

I enjoyed this session, some new tips!

Best practice for use of catheter is no use. Realistically not the best practice but some precautions can be use to help prevent infection. Complicated but can be done. No specific time for change, yet most institutions have time frame for changes

Interesting. I never thought about someone having foot neuropathy also have neuropathy of the bladder.

Excellent , very informative

Really enjoyed presentation & learned many things that I had not heard or thought of before. I love when that happens!

I liked the recommendation of using smaller catheters when there is leakage as opposed of using large Fr. catheters, which aggravate the problem.

Thank you Judy for sharing your knowledge and Practice PEARLS.

Was a great update for me. Thank you!

Haven't had to use urinary catheters in a while but very good information and a good review of what I had learned previously.

Very interesting, but a lot of information to squeeze into the time frame.

good information to help with preventing Cauti

Excellent review of catheters and current EBP. Also appreciated that she came despite a debilitating back injury that required her to sit.

Humorous; good speaker.

Great info about double voiding and putting diabetics on a voiding schedule

speaker knowledgeable and interesting information shared

I can apply this to my job.

VERY INFORMATIVE

Great information provided by Judy Dattilo!
