

**09/12/2015 201511 Use of Probiotics in the Prevention & Treatment of C-Diff**

Objective	# Resp	Avg.
1. Describe the epidemiology of C-Diff.	178	4.871
2. Review prevention strategies for C-Diff.	178	4.860
3. Discuss specific patient case scenarios with group.	178	4.837

<b>Jason Sniffen</b>	<b>Seaker Overall Avg:</b>	<b>4.840</b>
Presentation was fair, balanced and free from commercial bias		4.81
Teaching Methods/Ability		4.84
Demonstrated Expertise and effectively communicated the topic		4.87

Very interesting session.

Excellent information -will be able to assist future & present veterans with this information.

great information, useful for practice

Great presentation and very timely for our clinical practice! Great speaker.

Enjoyed case scenarios

Best session of the conference!

great information, OTC med mentioned

Great information. ProBiotics are not all the same great to know

Very good speaker. Had the most new information in it.

great speaker. Engaging and humorous

Excellent explanation of a common widespread problem affecting healthcare today.

great insight on probiotics as a treatment regimen. Speaker was very knowledgeable

Excellent

VERY EFFECTIVE SPEAKER...I ENJOYED HIS PRESENTATION

Very informative and up to date.

Very interesting and applicapable to my practice. Hope to incorporate this at my hospital

excellent information

Great info, along with Great research references! I will definitely find a way to get this discussion of using BioK+ with my hospiitalists.

Great speaker

I could not wait for this lecture!

Having Dr. Sniffen as an expert Infection Preventionist was a great asset to our conference and his presentation was informative and excellent!

Great information! Will need to check with my facility on opening capsules at bedside!!

very informative!!

Great presenter. He also fairly delivered criticism of products that do not meet up to evidence based standards. One of the better sessions.

very great speaker. wish he could come every year!

Very informative but content was more specific to MD than to nurses

Had important informations on C diff which we can apply to help our patients.

This was well presented and I believe it is a very important treatment that is underutilized. In my hospital, Infectious Disease often recommends the antibiotic therapy, I plan to ask if they include probiotic recommendations. I did not know about the pr

Enjoyable speaker; knowledgeable.

it is amazing to me how much of most illness can be helped by hand washing--the first thing leaned in nursing school. A lot of probiotics are disappointing but there are some helpful

excellent presentation, very easy to follow. lots of good information. Now have much better understanding of how & when to treat C diff and role of pro-biotics.

Terrific practical insight!

Having just been to a presentation on fecal transplants, this was some good additional information.

This condition is far too common. Thanks for raising awareness for prevention and treatment.

Helpful esp. in long term care

Fascinating!!! So many take-aways

Interesting that it can take 3 weeks for normal GI microflora to resume after antibiotic therapy. Thanks for the "low down" on probiotics . . .I have already shared that with a couple of patients since conference!

Best lecture I've heard on C-Diff. And the probiotic information is something I can use in my practice. Thank you

Informative and a take home message with this session.

Good presentation with the latest information. I found this to be very helpful

great information. really learned some new things with this speaker.

The effectiveness and ineffectiveness of various probiotics and which population should take them

Bit distracting standing at the side of the ballroom where many could not see him. Personally just glad he showed up!

Dr Sniffen was a good speaker but so much of the info he shared was not in the slide presentation. Overall, a good presenter, just more detailed slides would have helped me follow along...I'm a visual learner, not a great auditory learner.

Very useful information. thank you!

very interesting topic - relevant to all nurses and good to discuss with our physicians for future treatments.

I appreciate learning about backwash colitis and the role of probiotics to prevent colitis.

Good speaker. Important info to take back to the outpt clinic.

Great lecture, glad he came down into the audience. Very informative!

important topic to apply in my practice.

speaker was a little fast and some slides were a little busy

I NEVER KNEW PATIENTS SHOULD NOT CONTINUE TO BE TREATED WITH ANTIBIOTICS AFTER INITIAL TREATMENT.

Dr. Sniffen noted that C-Diff occurs more often in the gero population due to immunity decreasing with aging. He also noted that a vaccine is under development for C-Diff.

Wonderful talk. Dr. Sniffen was so reachable in his conclusions. I am glad he gave a lot of his own opinions. I submitted the evaluation but used Dr. Norman name instead of Dr. Sniffen. sorry!

Interesting information - useful in practice

Very interesting and informative!

interesting!!
