pouching issues unique to each patient

excellent job

i wish the slides be more clear,other than that she's a great speaker.

hands on opportunity greatly appreciated

hands on, great scenarios

As a new ostomy nurse, seeing the use of the barrier products, rings, strips, paste, as well as other tricks, helped to make me a little less fearful of the process. Giving me a little confidence to not only use the products, trusting them, but also that

great info and good hands on

I think she could have talked about the emotional issues and interventions more. I did not hear much about it. She was very good, otherwise

great discussions with suggestions for successful pouching, love the hands on practice

Enjoyed the hands on challenge

This session was very beneficial, especially the opportunity to practice hands-on.

Hands on activities very useful

The stoma models were great and I appreciate the effort Karen put in to making them. The pictures were helpful to understand the extent of deformity and emotional distress.

Wonderful presentation

Karen is always an enjoyable speaker. She has a great deal of experience and is willing to share her tips and even a hand or two on how to accomplish pouching the most difficult patients. The models were an excellent idea for the session. I am always glad

loved it!

great hands on experience

Great speaker. The models and hands on session were great. I felt like more info should have been provided about 'emotional issues'.

loved the hands on activity!

This was a great learning experience for me. Well done.

Excellent presentation. Well informed. Excellent photography. Speaker was knowledgeable and entertaining.

Speaker knows her subject very well and was able to deliver it very well

Excellent class and presenter!

Karen is the greatest!!!

Enjoy the workshop portion.

Very engaging speaker and topic, great way to start the conference!

Speaker was entertaining and knowledgeable. I was able to take home many new ideas from this session.

I love the interesting case studies. Each time I hear a presentation from Karen, I learn something new! Thanks.

The speaker was awesome and she had so many case photos. Very similar to the types of patients we see. I did not get a good seal on my model stoma/fistula but Karen provided great input to help me next time.

had so much fun at her session! She was amazing

this pre conference was a little different than what I thought it would be. Mit was enjoyable, but didn't really tell me much I didn't already know.

There was really no information at all about interventions to assist patient/family re

great energy and information. Loved all the pictures and fill in the crease techniques

Karen is a frank, down-to-earth public speaker. She provided a wealth of tips and information.

I would have liked more instruction with practicing the pouching of a fistula. I think it would have been helpful if all the participants had had the same fistula model and that we all pouched it together with step by step guidance from the instructor. Or
