08/25/2016 201603 New Trends in Radiation Therapy for Colorectal Cancer

Objective	# Resp	Avg.
1. Explain advances in radiation techniques to improve outcomes and/or decrease toxicity	151	4.649
2. Understand data on definitive chemoaradiation	151	4.589
3. Understand the use of short course radiation	151	4.623

Manisha Palta	Seaker Overall Avg:	4.722
Presentation was fair, balanced and free from commerical bias		4.77
Teaching Methods/Ability		4.67
Demonstrated Expertise and effectively communicated the topic		4.73

Very interesting topic.

Lots of new information

Knowledgeable speaker but lots of #'s and terminology. Lost my attention after 30 min.

Excellent. Patients always have questions they forget to ask the MD, knowledge for me is better care for my patients.

Very informative

Informative, good to know about new trends in use of radiation therapy in the treatment of colorectal cancer.

expanded my knowledge quite a bit. thanks

Excellent content and very timely

Interesting to see what our European counterparts are doing

she did great and i could follow what she was talking about even if this is higher level. glad to see there is good research out there

great speaker

Great information presented regarding options for treatment of colorectal cancer!

Good insight and remediation on seldom seen issues.

This was such a great session!!! I really learned a

The information presented during the above mentioned session was very interesting and explained well by the presenter.

This was a little too technical for me-needed more summarization perhaps or WOC nurse interventions

Intersting topic...learned some new things.

Dr. Palta was well educated and explained radiation trends for everyone to understand.

Very educational

good information to hear about for our patients

I really enjoyed Professor Palta's lecture. I liked that she incorporated different studies to support the information that she was providing. She had a nice combination of pictures and text within her slides. I like how she gave a background of how radi

Great Communicator, concise presentation, good studies for selection group, good information to start dialogue with surgeons and oncology.

really interesting. Don't usually get to see the big picture of treatment. Usually just involved in the ostomy side of things so this was really helpful

It would have been nice to have covered skin complications and treatment options for radiation exposed areas.

new information well presented

I'm glad to see someone look at the length of time that patients have to undergo radiation therapy

Dr. Patta, although knowledgeable and bright, used way to many studies and comparisons with graphs that had me very confused with trying to figure out the abbreviations and then losing the train of thought of her discussion at hand.

wonderful speaker and content

test comment

Very good session. Speaker was knowledgeable and presented information well.

Would like more on preventative skin care and/or treatment of radiation dermatitis.

informative

Excellent speaker who shared the information in an attention keeping manner.

very interesting and good info

I appreciate knowing more about what our patients go through regarding radiation and chemotherapy.

I have much greater understanding that will benefit my patients

Use of graphs and slides of CT before and after radiation were helpful.

Very helpful lecture. thank you.

Session covered the latest trend in radiology treatment and advancement in treatments to prevent/lessen side effects

very informative,.

This was a great session. Lots of great info for taking care of our patients and answering their questions. Fascinating info on short term radiation.

found this lecture a little too advanced for me in my local practice, however good knowledge

Interesting but not as relatable to worn practice as I had hoped.

useful before and after radiation

I was especially interested in learning about the 5 day course of radiation instead of the longer course as I have a friend going through this process now.

being sensitive to patient needs are important in wc

Dr.Patl explained new trends in radiation and made it interesting and relevant to my practice.

One of my favorite sessions. Dr Palto didn't speak "over our heads", was very knowledgeable and shared her knowledge freely.

very good speaker! Really great explanations!

Good speaker with clear information on a complex topic.

Great and relevant topic to include!

Interesting. Does not pertain to my particular work, but very interesting and appreciate the information.

The pictorial presentations help in the understanding of the material being presented. This session helped in the understanding of the care we provide and the actual radiation treatment being administered to improve the patient experience for a treatment

Excellent slides. I needed this update on radiation, chemotherapy, and colorectal cancer.Excellent presenter and kept our attention.

new info for me on radiation updates. would have like her to talk a little about skin care products she uses on skin issues that are safe and effective. good presentation

excellent speaker. Would like to hear her again
