

08/27/2016 201610 Fecal Transplantation in the Treatment of Clostridium Difficile Colitis

Objective	# Resp	Avg.
1. Understand the role that fecal transplantation can play in treatment of Clostridium Difficile Colitis	150	4.847

Robert T. Elliot	Seaker Overall Avg:	4.713
Presentation was fair, balanced and free from commercial bias		4.82
Teaching Methods/Ability		4.56
Demonstrated Expertise and effectively communicated the topic		4.75

knowledgeable presenter

Great new information.

Enjoyed learning the step by step process of fecal transplantation. Very informative.

Would have been nice to have seen videos or case studies of before/after transplant

Very interesting topic. Enjoyed learning more about it.

Interesting topic

Very interesting, very hopeful, new treatment for patients. Speaker was well prepared

Interesting topic. Speaker very knowledgeable, but lacked enthusiasm.

great subject matter, speaker paused slot during presentation...nice to have more information. On such a positive treatment!

great subject matter, speaker paused slot during presentation...nice to have more information. On such a positive treatment!

A bit hard to understand (speech) at times

interesting information on process.

interesting information on process.

Love his folksy approach to the subject. Excellent presentation of a not so pleasant condition.

excellent

good information

I recently had a patient who received a fecal transplant. Only the second done in our facility. It was successful. I was very curious how donor stool was obtained. I found Dr Elliott's talk very interesting. Surprised that fecal enemas were done as far b

Great presentation. This left me wondering why more physicians dont practice this if it is so successful. will share with my general surgeons.

This seems like a valid and important treatment. It is not done at my facility, but I hope we see more of this treatment.

This was an amazing presentation on the management of chronic C-Diff infection. Who would have thought that a stool sample could be used as a treatment modality

unique and interesting topic! Thanks!

Very informative to learn more about this procedure and how many locations actually do this. I have a cousin whose 2 children have had this procedure done, but I did not know much about it. Glad I attended and may more informed.

Needed to include current research, needed more statistical info on transplantation in US. more info on facilities currently doing to help with referrals--include slide regarding coding/ ie

Wonderful speaker. Would suggest next time make accommodations for his decreased hearing for Q and A.

very interesting topic , learned what its about now .

The information was good

So much fun with all the humor. Finished early and that was a plus. The lecture was not rushed and there was not an over abundant amount of material to get into one hour.

Getting specimens from office staff without routing testing and mixing in a blender is frightening to me. Consider this donor source, please: <http://www.openbiome.org/>

very interesting and informative

Impressive success rate with this I wish it was being performed more frequently. Speaker very knowledgeable and delivered talk with a good sense of humor

Magnificent speaker with very information

i can now do my own home fecal transplant!

Very interesting topic with a very thorough explanation.

Wow! What a great talk and good news for the C diff patients

Loved the step by step process explained so well.

I have been very curious and this was very interesting

Fascinating topic, I enjoyed this session

I had no idea how fecal transplant was done. I now have a much better idea. This was a wonderful discussion and thought the speaker added a good amount of practical solutions with humor.

Have not used in my practice but I was aware of the procedure. Appreciate the information.

Good information on underutilized procedure.

Very interesting

It was wonderful to hear from a surgeon who has been doing this routinely, it is still a novelty procedure where I work. The underlying process is fascinating and kind of crude, but I know it works. Despite Dr. Elliott's hearing issues, this was one of m

This was probably one of my most favorite topics. I did not know a lot about fecal transplantation prior to this lecture. I learned a lot about how it works, why it works, and was astounded at the success rate. Dr. Elliott was a wonderful presenter and I

Excellent presentation

feel more confident to start this conversation back home at my facility.

I had a bit of difficulty understanding/hearing the speaker. He had a great deal of difficulty understanding/hearing the questions.

Inspired me to gather information for a presentation to my NC WOC nurses group.

Excellent information although sound was somewhat low

somewhat dry in the beginning but as he got more comfortable with the audience he improved.

Learned a lot on this topic.

very informative!

Very interesting and wish insurance or MDs would try this more or send someone who does one treatment (hopefully) and done

Wow! What an awesome session. Cdiff is so prevalent now. Interesting that it is possible to have cdiff with no prior antibiotic use. And that some people are researching treatments on the internet and giving themselves fecal transplant enemas at home.

Really interesting topic would have loved to see more pictures of the procedure.

This was such an interesting session. Thank you for having it at conference!

Very interesting!

interesting. Great success rate. Congratulations

I felt we could have been more supportive and provided Dr. Elliot with a better way to hear the questions from the audience.

This was one of my favorite topics. Dr. Elliot did a great job explaining all of the details of fecal transplantation in his practice. It was very helpful and I plan to share the info with our Infection Prevention specialists since it is not being perfor
