

08/25/16 - 08/27/16

Greensboro, NC

**08/27/2016 201612 Atypical Wounds**

Objective	# Resp	Avg.
1. Identify atypical wounds common to wound care practice	150	4.720
2. Recognize diagnostic related procedures associated with atypical wounds	150	4.693
3. Compare wound care therapies used for treatment of common and atypical wounds	150	4.593

<b>Hardy Singh</b>	<b>Seaker Overall Avg:</b>	<b>4.691</b>
Presentation was fair, balanced and free from commercial bias		4.80
Teaching Methods/Ability		4.60
Demonstrated Expertise and effectively communicated the topic		4.67

Loved this presentation....would have liked to know some options more in the WOCN line, too.

Good review of atypical wounds and diagnosis. Not much on therapies for wounds. Good discussion about how to dig deeper into the pathology review to determine the true diagnosis.

Too basic, more antidotal than evidence based--concerning pathology no discussion about using a dermatopathologist for atypical wounds. Treatment options needed to be discussed in detail

It was refreshing to hear a doctor praise the knowledge of a WOCN. Identifying atypical wounds can be very challenging and discussion of the steps to reach a diagnosis was very informative

Good reminder that we don't know everything and realize when it is appropriate and judicious to refer/defer. New information for me on biopsy technique and pathology reports.

Very informative

Interesting topic,

Photos and discussion very relevant to my practice.

more pictures

excellent

This was more dermatology in this lecture than wounds, not sure an orthopedic surgeon most credible choice of speaker for this topic. His major points of sending to dermatology or getting biopsy were good.

I would love to see a WOCN nurse or ARNP present this lecture.

learned a lot

Enjoyed the pictures and the different wound types

This presentation was great. I liked how Dr. Singh identified barriers in care and how to question something that just does not fit the description of what is the normal wound. He gave us tools to use and I enjoyed learning more about atypical wounds.

Loved the exposure to less common wounds and hearing alternative methods of care.

great use of photos, I am very visual. I love pictures with discussion anytime

Case Studies were needed

great pictures. Good info

I learned so much! Specifically on biopsy for PG

Dr. Singh was very interesting and captured my attention!! Enjoyed having slides where the audience could seek out the correct answer.

This was the best lecture I have EVER attended on atypical wounds. The taxonomy you used was excellent.

I really enjoyed this session.

Would have liked a little more information about treating atypical wounds when there is no one to refer them to, or the patients have been referred to us from Dermo.

I COULD NOT HEAR MOST OF WHAT THIS SPEAKER WAS SAYING. I AM BASING MY EVALUATION ON THE SLIDES AND WHAT LITTLE I COULD HEAR. AND I WAS SITTING IN THE THIRD ROW.

Excellent information. Speaker was very knowledgeable

One of the best presentations of conference! Excellent slides with diagnosis and treatment options.

Most helpful and reassuring to a lone practitioner.

very informative.

I learned a lot from this session-- specifically about the importance of culturing atypical wounds.

ID of atypical wounds makes our practice more thorough and practical. Very good presentation to inspire in-depth assessment.

Very interesting lecture. I did have some difficulty following along with the presentation, not sure if it was his accent or the PA system.

coming from an Orthopedic MD, this was amazing. Collaboration with more MD/WOCN is needed; whether wounds or healing after surgery and proper referrals. Thanks

I will request skin biopsy more readily now if wound healing is stagnant or unsure etiology of wound.

A great take-away for me was that we need to be careful that biopsies are done carefully as patient's lives are in our hands. I learned a lot and am sharing info with my team. Thanks

I enjoyed this session because the presenter gave me the questions to ask when I assess a wound that doesn't meet the typical criteria.

Great review and informative.

presenter had very easy manner with good use of humor

very interesting!

Great presentation

very knowledgeable, but humble speaker. Very good presentation. Have him back!

great discussion about difficult to treat wounds

good info!

So important for all WOC nurses to remember to recognize and refer suspicious wounds.

A little difficult to hear or understand due to rapid speech, dropping his volume at the end of sentences. Good pictures.

A very good session with useful information.

Very interesting topic! This lecture helped me to change the way I assess wounds and obtain my histories.
