

**9/29/2017 201708 Changing the World for the Patient with a Colostomy: An Evidence-Based Update on Colostomy Irrigation**

Objective	# Resp	Avg.
Able to discuss qualitative and quantitative evidence regarding colostomy irrigation (CI)	171	4.842
Able to relate how colostomy irrigation (CI) could be integrated into your clinical practice	171	4.784

<b>Mary Arnold Long</b>	<b>Seaker Overall Avg:</b>	<b>4.784</b>
Teaching Methods/Ability		4.72
Presentation was fair, balanced and free from commercial bias		4.82
Demonstrated Expertise and effectively communicated the topic		4.81

Felt the speaker expressed her own opinion vs discussing the pros and cons of colostomy irrigation

Very informative

very interesting. information I had never been exposed to before. thank you

irrigation can take up to 2 hours and can lead to problems, procedure explained, and contraindications,

Take home: i want to teach more patients about irrigation. SO i think Dr LOnG achieved her goal.

so happy to see this topic revisited!

Dr. Arnold Long presented fabulous information. So glad to here we are looking at the financial impact of out choices. Thank you for sharing.

will think about this more with my permanent colostomy pts

Excellent information

Although I don't believe it was her intent, it felt as though nurses who haven't performed irrigation with their patients weren't advocates?  
Challenges we face are ERAS and early admissions and we do not have the ability to routinely see patients as outpa

Thorough

enjoyed the video, nice touch

Old is new again.

appreciate the video for reference

Colostomy irrigation can only be integrated into a clinical practice that includes post-acute care follow up. I am unfortunately unable to do that, although I will begin to include a brief discussion in my pre-op teaching when it is appropriate. I think

Slow going at beginning, would have liked more info on irrigation and not process for research

Good reinforcement of importance of teaching patients about colostomy irrigation and the improved quality of life it may provide. Great refresher and reminder that we can do more for our patients.

I always enjoy and learn a great amount from Dr. Long at conferences. She brought out valid points for encouraging colostomy patients to consider irrigation as a ticket to freedom from pouching. Her report card research summed it up nicely for the audienc

I really want to teach a patient to do the irrigation method. I have tried to introduce it to numerous patients but haven't had any takers. Now I understand it a bit better and think I may be able to help someone want to try.

excellent method of delivery, have never done irrigation but after the lecture felt competent on doing it. Clear concise straight forward information.

we are acute care facility and do not irrigate ostomies

Interesting presentation and video

Rarely experience patient who irrigates. May suggest more regularly to benefit specific patients.

Our clinic sees lots of ostomies so it was nice to see that this is a very useful option to help ostomy patients have more freedoms by irrigation. Mary was so knowledgeable.

since most of the ostomies I see are temporary, I don't offer it very often. I do offer it as an option for the ones who are permanent

Good review. Mary Arnold Long is a great speaker.

Speaker spoke quite loudly.

very passionate about this subject

I found the information presented interesting and that the data supporting colostomy irrigation is impressive. I learned about colostomy irrigation and the procedure.

A very good choice for presentation topic. It was very well presented.

wish more patients were open to this

Very interesting and convincing! I am really encouraged to suggest this to my permanent colostomy pts or those who may have one for an extended period of time. We are seeing so many younger people w/ colostomies these days and I think it could be a great

good information and reminder to look at our patient lifestyles outside of acute care visit.

I was glad to have a discussion re irrigation again, as it's hard to teach this in hospital but we can teach this at home with Home Health

Very nice review of the benefits of irrigating. The most recent challenge is access to clinicians, so many wound centers no longer offer outpatient ostomy services.

Information on timing was biggest light bulb for me

Everything old is new again. We all can learn something new about irrigation.

It was wonderful to rediscover this option for colostomy patients.
