

**9/30/2017 201709 Atypical Wounds**

Objective	# Resp	Avg.
Discuss atypical wounds, etiologies and treatment options	172	4.721

<b>Marcia Spear</b>	<b>Seaker Overall Avg:</b>	<b>4.766</b>
Teaching Methods/Ability		4.71
Presentation was fair, balanced and free from commerical bias		4.84
Demonstrated Expertise and effectively communicated the topic		4.74

Lots of interesting wounds were presented but there wasn't much for treatment options? Silvadene seemed to be the go to for the majority of the wounds.

Excellent case studies

very insightful

Needed examples of each type she discussed

Very interesting. Some new information

Her insight, pictures, and suggestions were very much appreciated and easily applied into my own practice. Another favorite session of conference.

Please please please come back next year! This was soooooo educational and helpful.

etiologies, principles and tx, multiple cases were discussed, very descriptive pics where helpful.

Wide variety of real case studies with different perspectives of disease and treatment.

I learned that Dakins and wound gel might be best option in difficult situations.

Wish we could have gotten through all of this. Could be a good topic for pre-conference.

Flew through much of the content

Morbid.

I feel as if speaker was only disxussing her cases. Never gave different options or inform why she picked the treatment she did.

Wish she could have finished her case studies

Good presentation

treatment of choice was revealed; treatment "OPTIONS" not particularly discussed Good pics of "atypical" wounds

Great session--wish it could have been longer!

reccomended Dakins as biggest treatment option

very interesting!

Needed more time, it was really good

Reminds me that someone else's patient population can be much different than mine. Good speaker. Interesting views although we are totally against wound patients showering.

Always need this topic to help identify unusual etiology of wounds, particularly in case of refractory

great pictures and descriptions of various wounds and how to treat them. Creative use of dressings

Interesting perspective from the dermatology angle. Please have Marcia back!

I like the idea of thinking about atypical wounds as zebras! I was glad to hear Marcia suggest getting a biopsy if the wound just looks differently.

Great presentation!

someslides( pic) especially female showed no privacy/dignity for pt. no innovative tx . Dakins dakins only.

The speaker was good and case studies interesting however I found in the cases she chose to share she utilized older methods of wound care. When I come to a conference I want too see what's new and innovative in my field.

Good pictures with descriptions

Excellent presentation

wish pictures of cas studies had been included in our handouts

Enjoyed the new information. Santyl and Dakins for debridement. Significance of dairy in hydronephrosis.

I LOVED this presentation. I wish that there would have been more time to have seen all the slides in the presentation. There are many times that we see wounds that do not fit the typical standard and we are left wondering, "what is this?" I loved that w

Great case studies to re-inforce identifying and treating wounds that don't fit our usual expectations, and that we don't see everyday.

Learned a lot; very informative and helpful. Learned some new and interesting treatments. 1/20th dakins! Good presentation.

Multiple case studies. Seeing the pictures of atypical wounds was helpful.

Information was great but delivered at a very fast pace, could have lessen information so more would be absorbed. The downloadable slides did not have pictures so after the lecture how do you match the information??? Should ensure photos goes along with i

loved the cases/pictures

Excellent speaker; loved the photos
