

9/30/2017 201710 Peristomal Complications

Objective	# Resp	Avg.
Am able to identify common peristomal complications and verbalize initiation of the appropriate treatment	172	4.680
Am able to verbalize common urinary and fecal diversion procedures, the rationale behind the procedure, and common risks associated with the procedures	172	4.686

Traci Brackin	Seaker Overall Avg:	4.663
Demonstrated Expertise and effectively communicated the topic		4.60
Presentation was fair, balanced and free from commercial bias		4.78
Teaching Methods/Ability		4.60

engaging speaker

good presentation, organized and funny. good pics

May have been better for a staff nurse, but she was not specific with what to do. She kept saying "get with me later and I'll tell you". Information was too elementary and not useful

differentiated between the different ostomy types and bowel consistency, peristomal, mechanical complications and specific tx options, Illiostomy stool will quickly cause peristomal irritation, correct placement of appliances,

I like Traci's teaching style. She chooses to share her empathy by describing what it might feel like to walk in somebody else shoes when they are living with an ostomy. I also appreciated how she included the audience in the follow up with helpful hints

audience suggestions in this session were very helpful.

Very informative

Good speaker. Also enjoyed her breakfast session which was non CE

Nice presentation. Also great input from attendees, new ideas to incorporate

Enjoyed ideas from the attendees of the session. Good suggestions. Speaker appeared a little weak on the subject

Great session!

felt this was basic information for WOC conference....good review

her presentation would have been appropriate for RNS were not WOCNs and medical residents.

Thorough.

Too basic. This is for brand new WOC nurses.

Best for novices to ostomies/peristomal skin complications. I learned more from the attendees when they offered suggestions on how they managed issues. Speaker was funny initially but then it became excessive with the joking around.

Good.

this was a very enlightening session for me. thanks for the information

Raised awareness of uncommon symptoms

new ideas for difficult soma pouching. The idea of using creativity to overcome nightmare pouching issues is something I can use in acute care. Use of wound manager for pouching great idea when there are numerous wounds in close proximity to stoma

did a great job!

Excellent information!

Interested to know that less than 0.6% of people have a true allergy to ostomy pouches.

Good review of common problems with some different ideas for treatments.

a tad boring. too much ostomy basics. would have rather heard more tips about ostomy problems and maybe pictures and solutions. the best part was the last 10 min when the woc nurse attendees talked about different things that work for challenging ostomy i

Learned a lot from the audience at the end of the presentation.

Degree antiperspirant for weeping, Restasis for pyoderma.

Especially loved the part where we learned from other WOCN's in the audience the tips and tricks they have learned over the years

This information was pretty basic; almost all of it is what we learned in WOC school. The discussion period at the end was extremely interesting and helpful and would recommend more of this I would appreciate a session where a topic/ostomy problem is sugg

Opening up the lecture to sharing of information was a great idea however information shared was lost as the participants did not use a "mike" so some of us could not hear and the full information was not repeated by the lecturer.

This information was too basic-covered in initial training in this specialty

This presentation was not geared for WOCN professionals. There is NO need to review diversion types, risks, and rationals of the procedures for WOCNs. New methods or tips for managing complications is what WOCNs are looking to learn.

Great tips provided.
