

9/21/2018 201806 More Than Signal Flags - Telehealth for Wound & Ostomy Patient Success Across the Care Continuum

Objective	# Resp	Avg.
Describe telehealth models of care commonly used in wound and ostomy programs including technology, sites of care and reimbursement	148	4.628
Identify benefits of using telehealth in wound and ostomy management programs and the licensure requirements of the WOC Nurse (non-APRN) to do so	148	4.628

Kimberly Smith	Seaker Overall Avg:	4.601
Teaching Methods/Ability		4.51
Presentation was fair, balanced and free from commercial bias		4.68
Demonstrated Expertise and effectively communicated the topic		4.61
Myra Varnado	Seaker Overall Avg:	4.660
Teaching Methods/Ability		4.58
Presentation was fair, balanced and free from commercial bias		4.68
Demonstrated Expertise and effectively communicated the topic		4.72

Intriguing use of technology that provides access to health care
Informative.
Good presentation.
Would like more generally applicable material
Not sure how well received this will be, definitely good for thought
Informative.
Great information on Telehealth. I would love to implement it in my practice
Love this topic, would like to hear more about it in the future conference.
Very good to have 2 different settings. Would like to have references on what kind of equipment and where to get it and how to set up a telehealth program- policy, procedure, etc.
All information was useful but I didn't quite make the connection between Home Health portions and telehealth unless it was suppose to be HH using telehealth. Each section was informative independently, just missed the connection between the two presenter
good information
Interesting concepts, great new information
Found it particularly interesting that a state nursing license is required for most telehealth assessments that are performed in one state, when the assessor is in another state.
Good information.
The presentation was wonderful and so helpful in bringing to light such a powerful mode of providing care!
Found this to be a lot more interesting than I thought it was going to be!
Felt like this was an implied commercial for Myra's telemedicine company.

Very Interesting topic
Great to know this technology is around to reach rural areas and areas with less certified professionals.Look forward to more programs like this starting around the nation.
none
Not sure how this is very effective
I hope this isn't going to take my job away! It is an interesting approach. I still think hands on works best for me.
Myra and Kimberly worked well together in presenting this information. Learned about new technologies.
This was very interesting to me. Although I have known about telemedicine--using it for the WOC nurse intrigued me.
Great alternative to acute care
Very good
I am very interested in this method of helping this population. It is still not completely clear on how to get into telehealth.
This could revolutionize wound care! I'm very excited to continue to see how we can use technology to advance wound care and reach patients not only in other states but across the globe.
Myra gave a Fabulous presentation! This is the future!
Informative on what may be coming in the future
great to share new technology and care
Telehealth is just beginning to make its way into our health care system. I appreciate Ms. Smith's and Ms. Varnado's exposure of use benefits.
This presentation was very educational in the outpatient/home health setting.
Had not considered this application of telemedicine; love the idea for rural areas not easily reachable
Great topic but the lecture was not great. Very scattered. Difficult to follow. Did not tell me anything about Telehealth. I do telehealth on a weekly basis and was very excited about this lecture. It was very disappointing. Did not explain telehealth. Ke
This was a very interesting discussion, but it was not particularly useful for my current position--acute care Nursing.
OK
With the lack of available WOC RNs in many settings, this application is going to have to become more common.
okay
This presentation is very timely. There are direct implications for nursing practice in rural areas near my hospital.
This was an interesting presentation, although I feel there is no substitute for being present with the patient when diagnosing wounds. I know telehealth is very beneficial when personnel is limited. Guess it will take me a while to jump on this band wagon
I enjoyed the two different view points from Myra and Kim during the lecture.
Enjoyed
A bit too much self promotion
Felt as if Mrs. Varnado was promoting her company.
Having trouble-shooted over the phone when I was the out-patient ostomy nurse for Orlando Health, I found similarities in this presentation and in my trying to help ostomates manage problems via telephone. Not easy to be sure. Telehealth is an interesting
Being like the Jetson's doctor.. sounds found
Good information
This was new information to me so very informative
